Logging in to the Infinity Hotspot on mobile devices

iOS & Android mobile devices can access the Infinity Hotspot login web interface in a couple of ways:

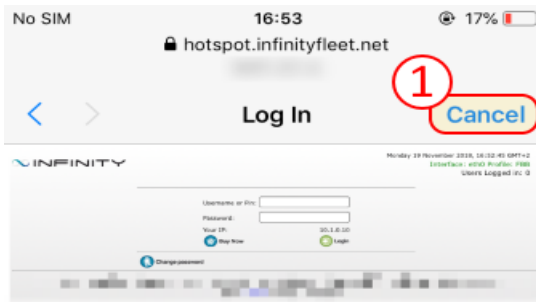

1. Depending on the configuration of your mobile device, the Infinity Hotspot Login web page may automatically pop up (as per the images below) when you connect to an Infinity Hotspot WiFi network. This will allow you to enter your Infinity User credentials (either *username & password* or *web PIN number & password*) and access the Internet.

If you want to stay connected to the Infinity Hotspot WiFi network but not to access the internet at this time, then you should:

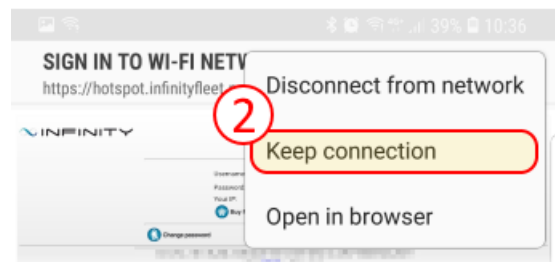

iOS

Select **Cancel** > **Use Without Internet**

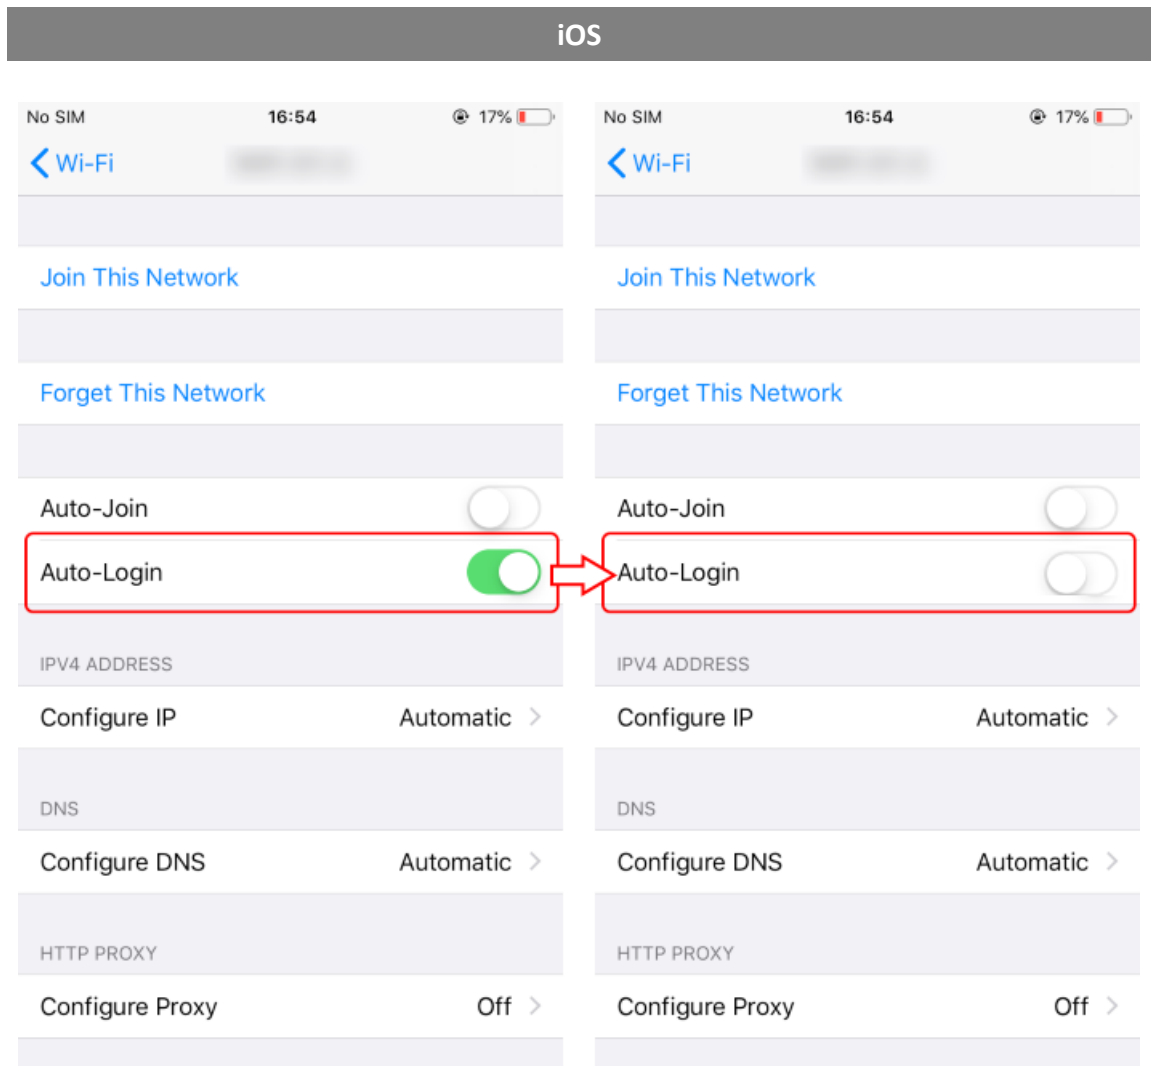

Android

Select **:** > **Keep Connection**

If you use an iOS mobile device and you don't want the login page to automatically pop up, make sure that **Auto-Login** is disabled for the Infinity Hotspot WiFi network (as in the picture below).

- The alternative way to access the Infinity Hotspot login web interface is to manually open a web browser and navigate to <https://hotspot.infinityfleet.net:3991> in order to enter your Infinity User credentials (either *username & password* or *web PIN number & password*) and access the internet.
